## *45 SUPERHEATER PENDANTS IN RECORD TIME*

### **ANOTHER RUSH JOB, ANOTHER MUNROE SUCCESS STORY**

Right on the heels of an emergency repair job for a major steel producer, Munroe again received a request from the same customer for another rush job, this time involving Munroe's Ringgold, GA facility

The steelmaker needed forty five superheater pendants replaced on one of its coke boilers. Munroe was given a "three-to-four weeks, tops" timeframe to

complete the work. There was no other alternative, as the steelmaker needed to have all of its coke plant boilers ready to go in anticipation of increased production.

Munroe immediately sent personnel on-site to ascertain the needs and pickup sample elements. Within two days, the Munroe team was in full swing, establishing the extent of the work and engineering the project. Tubing was expedited from Colorado for 16 of the pendants. Due to strong vendor relations, Munroe was able to procure the tube material for the remaining pendants in less than two weeks.

Munroe worked seven days a week, 'round the clock, to accelerate the production schedule and turn the project around, fully completed, in less than three weeks. Truly a team effort, Munroe utilized the skilled craftsmen at its Ambridge, PA facility to provide support for the Ringgold operation.

The combination of multiple facilities, strong vendor relationships and a truly dedicated workforce, allowed Munroe to again meet a customer's most critical demands without a glitch.

**About Munroe Inc.** *Munroe produces stringently engineered equipment for demanding applications in the steel, power, paper, petrochemical and waste industries. Munroe products include BOF and EAF hood components for the steel industry and boiler components such as super heaters, re-heaters, economizers, membrane wall panels and heat exchangers. Munroe supplies components to many OEMs and fabricates replacement and retro-fit components for end users. The company is headquartered in Pittsburgh, PA and has more than 300,000 square feet of fabrication space at three fully-equipped manufacturing facilities in Ambridge, PA, Youngstown, OH, and Ringgold, GA.*
